

## **HIPCOM SELECTS LEADING VOICE GATEWAY FROM ONEACCESS**

### ***New router to support high demand VoIP solutions***

**Paris/London November 2008** - Hosted IP Telephony provider HIPCOM today announced the strengthening of its hosted IP telephony capabilities as a result of a strategic technology partnership with OneAccess, a leader in multi-service access routers. OneAccess will supply HIPCOM with its One300 router, a highly affordable 30 channel professional business-class PRI voice gateway.

The One300's programmable web browser interface has been designed to integrate with HIPCOM's service enabling customers to connect the router without the need for any assistance.

James Brind, CTO of HIPCOM, said, "We understood immediately the advantages of the OneAccess solution. The One300's unique ability to simplify the installation process using a clear and simple interface for the web user will result in a seamless installation with no fear of configuration errors. This has tremendous appeal for our resellers. HIPCOM together with One300 allows users to immediately benefit from advanced VoIP services without immediately undergoing a transition to a fully hosted solution. Our Resellers can offer services such as SIP Trunking, Zero-Touch disaster recovery, Microsoft Outlook integration and Click-to-Dial to the customer existing PBX."

In addition to VoIP services, the device features powerful router functions including Quality of Service, secure access control and wireless for private or public hotspot services. The ONE300 embeds a suite of tools to deploy, manage and supervise service delivery more efficiently. Versatile and easy to operate, the ONE300 lowers total cost of ownership, and creates value for both carriers and businesses delivering bundled voice, data and wireless connectivity.

Alan Brazier, Chief Strategy Officer at OneAccess said, "We develop products that meet very specific needs of our Telco clients, maximising the value and benefits of their services. The One300 is no exception: it is custom-made for the job at hand. Its advanced web browser interface, that uses plain language scripts, is a great example of how we understand our clients' needs for performance and reliability, but also simplicity, even with a fully-featured gateway platform."

**About OneAccess**

OneAccess is the agile, purpose-built alternative for Telcos who wish to deliver customer value and achieve real competitive advantage.

Created in 2001, OneAccess develops and manufactures multiservice access routers and network access equipment. OneAccess built its success by focusing on answering telecommunication operators' requirements. The OneAccess product range is designed to deliver top-quality data and voice services, ensuring high security levels, reliability and facilitated integration. The result is improved productivity and reduced Total Cost of Ownership.

Since its creation, OneAccess has grown to become a worldwide provider of network access equipment, working with a large number of incumbent (ILEC), alternative (CLEC) operators and various other Service providers.
